

Navigata Data Centre Colocation

What if you could increase the security and availability of your data – and still have the freedom to focus on your core business?

Navigata Data Centre Colocation* offers robust, high-bandwidth internet connections in stable and reliable environments to ensure the security of your data and equipment. These data centres provide 99.99% core network uptime, 24/7 core network monitoring and independent generator-driven power backup. Your mission-critical equipment can be housed in data centres located in downtown Calgary, Vancouver and Toronto at a fraction of the cost of building your own facility. Don't let building and continually upgrading facilities to house network architecture be a barrier to your company's success. Secure a faster, more efficient way to deploy your networks successfully and reliably using effective colocation.

Security and Availability

Our secure facilities include 24/7 security, video surveillance and controlled physical access to protect your equipment from damage, theft and vandalism. Availability assurances include:

- Superior Navigata Service Level Agreements (SLAs) with four-hour MTTR targets and 99.99% core network uptime commitments ensure that your data is always available
- 24/7 core network monitoring and technical support guarantee best practice processes and technology, keeping your data secure and your application available at all times
- Redundant heating, ventilation and air conditioning (HVAC) climate controls maintain an optimal environment for your equipment, ensuring its safety and further guaranteeing the uptime of your application
- Pre-action fire suppression system contains fires by zone and limits the distribution of water, minimizing potential damage to your equipment and data
- Independent generator-driven power backup and flexible power options (AC, DC, UPS) prevent downtime in the event of a power outage

Scalability

Navigata Colocation is designed to accommodate individual customer requirements, and various server housing options mean that your colocation solution can expand as your business grows. You can start with a shared cabinet, for example, and increase to a full cabinet or even a private data suite. Scalable bandwidth, from 10 Mbps to Gigabit Ethernet, considerably improves web site access speeds, and your data traffic is fully burstable to subscribed access speeds. In addition, optimized traffic routing is delivered via multiple internet peering agreements across the country, and multiple Gigabit speeds guarantee fast, reliable transit.

Cost Savings

Shared use of data centre infrastructure offers significant savings over the cost and time investment of building and maintaining an independent data centre. You can also save money by using the Remote Network Monitoring option, which enables you to monitor your internet usage remotely to avoid incurring overage charges.

Navigata Data Centre Colocation

Stability

Navigata is backed by SaskTel, a communications company that provides successful network solutions to companies around the world. SaskTel continues to build on almost 100 years of communications and technological experience, providing stability, security, innovation and excellence to government and corporate accounts. This relationship ensures that Navigata is nimble enough to respond to unique customer needs while offering early access to leading technologies along with the experience of over 400 IT technical staff. At Navigata, we understand how crucial your network infrastructure is to your business, and we offer you the security of an experienced, reliable provider for your colocation and bandwidth needs.

Add-on Features

Tape Rotation: Back up your hard drives daily or weekly

Managed Firewall: Lease or purchase best in class firewall equipment, enabling Navigata to provide and upload critical updates to your servers

Server Data Backup: Obtain worry-free, secure and continuous online data backup to an HP Signature certified data centre

Managed E-mail Protection: Scan all incoming and outgoing messages and attachments to protect your e-mail server and corporate network against viruses, denial of service attacks, spam and other threats

Colocation enables you to build your servers using the combinations of hardware that work best for your company, and you have physical access to your servers twenty-four hours a day, seven days a week. Best of all, you maintain ownership of and complete control over your hardware and applications.

Contact Us

If you have network connectivity, security and redundancy requirements, Navigata can help. We offer scalable solutions ranging from the leasing of cabinet or caged space to a managed hosting option in a world class data centre.

Contact a Navigata representative today or call our Customer Care team to see how Data Centre Colocation can help you focus on your core business.
